

CONCENTRIC
GEOSCIENCE

ANNUAL SURFACE WATER AND GROUNDWATER MONITORING PROGRAM

Completed for a southwestern Ontario petroleum storage facility

Concentric's geoscience team undertakes semi-annual sampling of surface water and groundwater monitoring locations at a large southwestern Ontario petroleum storage operation. Monitoring is undertaken to meet the facility's due diligence and provincial compliance obligations. Field mobilizations are carried out to achieve high quality and effective sampling that factor in variable field conditions while also maximizing project efficiency. In-project updates are provided to the client as data is received and evaluated and a final annual report for each of the surface water and groundwater monitoring programs are provided at the conclusion of the sampling sessions. The scope of involvement has also extended to installation of new groundwater monitoring wells.
