PERMIT TO TAKE WATER FOR GREENHOUSE EXPANSION

In progress for a cannabis production facility in southern Ontario

Concentric Geoscience completed a Category 3 hydrogeology investigation and is facilitating a permit to take water application in support of an 880,000 square foot expansion of a cannabis production facility in Middlesex County, Ontario. The study involved the assessment of information and data from a site visit and background review to evaluate potential impacts of the proposed taking. Concentric Geoscience determined that the requested taking posed a relatively low risk of unacceptable impacts to existing water users and advocated on behalf of the client for a proposed desk-top study approach through pre-consultation with the MECP.
