

**CONCENTRIC**  
GEOSCIENCE

## ANNUAL GROUNDWATER MONITORING

### Completed for an international agricultural retailer

Concentric Geoscience is retained to conduct on-going groundwater monitoring at a fertilizer distribution center near Elstow, Saskatchewan. The objective of the monitoring is to identify leaching of nutrients from fertilizer stored at the site and ensure no off-site migration of potentially affected groundwater. The scope involves groundwater level measurements, sample collection, data analysis, interpretation and reporting with annual recommendations.
